

Request for Expert Evaluation on A-CARE Framework for Optimizing Communication in Agile Requirements Elicitation

Dear Faizan,

I hope this message finds you well. My name is Ayesha Zaveri, and I am currently in the final phase of my PhD at the University of Kuala Lumpur. As part of my research, I have developed a framework called A-CARE; a three-phase Agile Requirements Elicitation Framework designed to optimize communication during the requirements lifecycle in Agile environments. This framework emphasizes structured and continuous communication as the core of requirements identification, validation, and refinement, while aligning with Agile principles and leveraging modern AI-augmented methods.

The **A-CARE Framework** is structured around the following core components:

- **A (Agile):** The framework is explicitly designed for Agile environments, supporting iterative development, continuous feedback, and adaptive handling of requirements.
- **Communication:** Communication is placed at the core, facilitating effective elicitation, validation, and refinement of requirements rather than relying solely on documentation.
- **A (Aligned):** It ensures alignment between stakeholders, development teams, and Agile practices with evolving requirements through the integration of AI tools.
- **R (Requirements):** It emphasizes the systematic handling of both functional and non-functional requirements.
- **E (Elicitation):** The framework guides structured discovery, clarification, and prioritization of requirements.

To validate the framework's practical applicability and overall quality, I would greatly appreciate your expert evaluation. Please find attached the User Guide for Framework Implementation, which outlines how the framework can be used in real-world Agile projects. Your feedback is crucial to refining the guide, ensuring its clarity, and enhancing its value to Agile practitioners.

Specifically, I would like your evaluation on the following aspects:

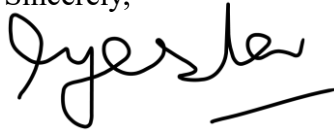

1. **Clarity and Comprehensibility of the User Guide** – Please assess whether the intended users can understand and follow the framework without external explanation.
2. **Alignment with Agile Principles and Practices** – Confirm if the user guide reflects Agile ways of working and integrates Agile principles appropriately.
3. **Effectiveness of Guidance: Practicality and Applicability** – Evaluate whether the guide is operationalized, meaning whether the framework can be realistically implemented and realized within an organization.
4. **Overall Usefulness and Contribution** – Please assess the overall usefulness of the framework and its contribution to optimizing communication in Agile requirements elicitation.

I look forward to receiving your valuable feedback, which will play a critical role in improving this framework. Your expertise and experience in Agile methodologies will be invaluable in ensuring that the

A-CARE Framework meets the needs of Agile teams striving for effective requirements elicitation and stakeholder engagement.

Thank you for your time and support. Please do not hesitate to contact me should you require any further information or clarification.

Sincerely,

Ayesha Anees Zaveri
